In the May 2011 edition of ***Gitarre & Bass***, ***Voodoo*** (www.VoodooAmps.com) had their *V-Rock 100* tested and ***Mercury*** was very highly praised. You can see this test in the attachments.

The tester, Ebo Wagner, wrote:

> "However, specially selected components are used: from coupling caps to the exquisite custom *transformers* from ***Mercury Magnetics***, currently the leading manufacturer in this field, especially in terms of replicas of old *transformers*."

He judged the tone, dynamic, transparency, response behavior, over tone spectrum (as very intensive and very lively), high gain with very harmonic distortion characteristics in the best praise possible.

In the June edition he tested the *Hook R20* and *R40* and wrote the following about ***Mercury***:

> "All the *transformers* come from ***Mercury Magnetics*** and are currently the finest what one can purchase in this sector. With this in mind we already suspect that the rest can't be bad either (won't have bad parents either)."

Again, in this test he marked all the tone/reaction points with highest marks.
